My wife and I are truck drivers running across country. It is very hard to get traffic and weather information from local radio station, when they only report it every 15 min. or so. Then if you are not a local driver you really don't know where the problems are at because of the way they report it. With the satellite reports they are constant giving traffic and weather so you are better informed. People will listen to what serves them best, if the local stations are afraid of losing listeners they should do a better job of informing their listeners. Satellite radio is not reporting local news, just better traffic and weather. We do not think the FCC should allow NAB's petition 04-160 to pass
